

WHY I LOVE CEE!

I love CEE because of how important our role is to society. As a Civil Engineer we have the ability to design and improve the structures that are used in our everyday lives. We also have the privilege to help the community and improve the environment. **I am grateful for the opportunities at Rowan's CEE Program. They have provided us with the skills to prepare ourselves for the challenges we will face, in order to make an impact in our society.**

I fell in love with CEE after seeing so many different kinds of structures. But a word from my professor strengthened my love for CEE. CEE helps me to see my ideas into a visible structure. In our society doctor and engineer holds the same responsibility, for any of our small mistake cost the precious lives. **Civil engineering is not a mere job; it is a responsibility.** I am passionate to fulfill my greater responsibility for the greater good for the society.

Civil engineering is aspirational; this can be taken in many ways, but overall, I truly believe that our work will eventually make the world a better place. We can improve transportation while reducing its effects on the environment. We can save cities from hurricanes while providing safe drinking water. **The possibilities are endless.**

I love CEE because it encompasses a wide range of disciplines which play crucial roles in the health and safety of both the public and the environment. CEE has such a broad and radiating impact on everyone's daily lives that even if they don't know it, **everybody should love CEE.**

I love CEE because it will uniquely give me the ability to work across many different disciplines, that influence everyone daily, to leave this world a better place for the coming generations. Being a civil engineer is just what it means: **working as a civil servant to satisfy the needs of millions of humans directly and indirectly every day.**

Civil engineers change the world. We create a more accessible and enjoyable place to live. We selflessly solve problems for others at the expensive of creating more for ourselves. **In the end, it is all worth it.**

Every person who goes into civil engineering wants to **help others** in one way or another, and it feels the most connected to the community of all the engineering disciplines.

It's a **humanitarian profession** that always evolves civilization.

WHY I LOVE CEE!

It satisfies me when I am studying, conducting research or working on a civil engineering project.

It is a profession that builds infrastructures to protect, develop, and comfort everyone.

It allows me to pursue my interests and do work that can positively affect people. It also helped me meet some of my best friends!

It makes life easier and better for the world.

I love Civil Engineering because it connects me to my community and keeps the world advanced, effective, and open to everyone.

It has made me resilient and heightened my aspirations. I am inspired to expand my knowledge and skills to be a better engineer for the obstacles to come. Engineering makes me hopeful for the future and proud to be doing meaningful work.

Civil Engineers can turn dreams into reality and have a monument to prove they did it!

It allows a student to not only go behind the scenes and learn about the math and science behind the world around them, but to apply what they learn and make life long, meaningful changes to the world.

This major gives me the opportunity to one day use my strengths in science and math to help solve problems of our modern society.

I love civil engineering because it helps me to better understand the world around me through math and science, and it helps make the world a better and more accessible place for everyone.

It makes me feel that I am able to help others and make their life better.

It makes up everything in the world around us.

It makes me feel that I am able to help others and make their life better.

It gives me the chance to build something that will last a long time.

A way to make a change in the everyday life of many!
