

## Molecular Motion Demonstrator

**Purpose:** To provide visual aid for understanding molecular motion and the kinetic theory of gases

**Location:** room 136, shelf P3

This demonstrator may be used to illustrate numerous aspects of the kinetic theory of gases, from Brownian movement, random motion and the ideal gas laws to mean free path, solids and liquids.

Use on overhead projector for best visibility. (photo on right)

Note: Piston accessory for the advanced gas pressure demo is missing.
